

• Thank you for purchasing the our product. Before installing, please read the instruction carefully and keep it for future reference.

## **⚠** Notice

- Please, follow the step-by-step instructions for proper installation. Any damages caused by faulty installation shall be imputed to the users.
- To avoid a short circuit, do not pull the wires when installing the unit. Do not break or modify the wires either.
- Do not disassemble or change any parts.
- Maintenance and repairs should be executed by our professionals only.

Mark Meaning:

NOTE You could get the installation details from the information behind the mark.

▲ WARNING! Some processes must be followed to avoid damages to yourself or the public

A CAUTION! Some processes must be followed to avoid the damage to the vehicle.

# %

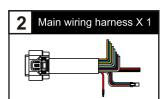

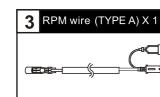

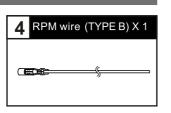

PRESS THE PRESS THE BUTTON BUTTON 3 ONCE SECONDS

# 1-1 Accessories

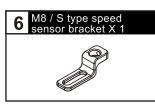

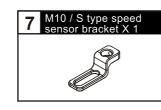

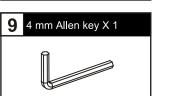

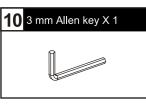

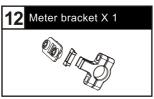

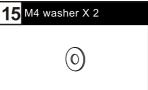

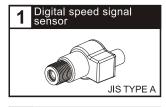

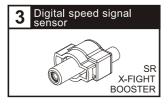

NOTE Contact your local distributor, if the items received in the box are not the same as the items listed above.

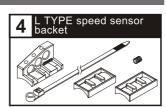

# 1-2 Accessories

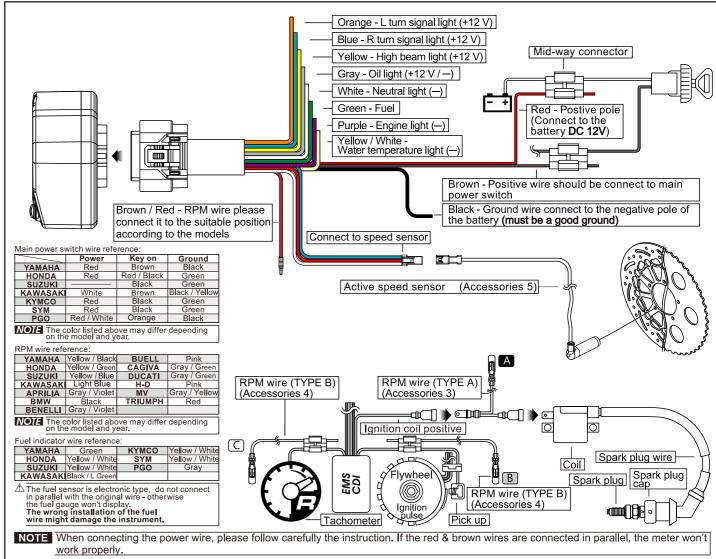

5 Meter bracket

NOTE Some of the optional accessories may not be available in your area. Contact your local distributor to obtain more information.

# 2-1 Wiring installation instructions

NOTE Motor oil indicator can be set up, install as two stroke motor oil indicator, or other positive(+12V) or negative actions' indicator.

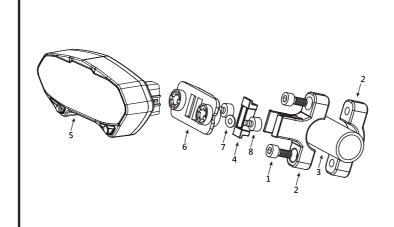

↑ The RPM wire installation

We recommend installing the R type spark plug or low-resistance spark plug cap at the same time.

- A. Connect the RPM wire (Type A) on the spark plug wire by connecting the male and female connectors.
- B. Connect the RPM wire (Type B) to the pick up sensor.
- C. Connect in parallel the RPM wire (Type A) with the original tachometer signal wire.

The best signal source will be in order as C>B>A, we will suggest you to check different ways if you have problems to get the RPM signal.

# 2-2 Installation instruction

# When installing, please follow the steps bellow.

1.M5 x 12L screw x2 (Accesories 13)

2. Meter bracket for handle bar (Accesories 12) 3. Fix the bracket on handle bar (7/8 inch)

4.Bracket x1 (Accesories 12)

5.Meter (Accesories 1) 6. Meter board (Accesories 12)

7.M4 washer x2 (Accesories 15)

8.M4 x 10L screw x2 (Accesories 14)

NOTE Adjust the meter to the proper angle before tightening the handle bar bracket screws.

# Special instruction for meter fix board.

A. Push meter bracket clip up to lock meter fix board (with meter) on bracket

B. Push meter bracket clip down to release meter fix board (with meter) on bracket

wh041ba02a(P6-1)

The active speed sensor could be installed by the metal parts to detect the speed.

EX. 1 The disc screw.

- EX. 2 The disc to detect the disc gap. (Please make sure the distances between the gaps are the same in advance to avoid wrong
- speed signal.)

  EX. 3 The sprocket to detect the disc gap. (Please make sure the distances between the gaps are the same in advance to avoid wrong speed signal.)

EX. 4 Rear disc - detect the gap between the disc.

We will suggest you to catch the speed from the disc screws. The more the sensor points are, the better the speed accuracy is. The maximum sensor points the speed sensor could detect is 20 points per turn.

After installation, please use your hand to turn the tire to see is everything ok. The LED on the active speed sensor will light up once the signal is detected.

EX. 1

The hexagon socket disc screw The best detect area: The edge of the hexagon socket screw.

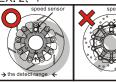

Please don't catch the signal from the middle hole of the hexagon socket screw to avoid wrong signal.

The hexagon screw

The best detect area: The middle of the screws.

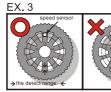

EX. 2, 4

The disc

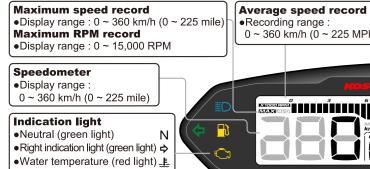

The best detect area: Please detect the speed signal from the gaps of the disc.

Please note that there are discs with the gaps in different difference, and this method will not work on it!

with the gaps in different difference, and this method will not work on it!

# 4-1 Circumference and sensing pointsetting

 Press the Select button to enter the circumference and sensing point setting screen.

#### A CAUTION!

- Please measure the tire circumference (
  The tire you will install the sensor on) and
  make sure the number of magnet sensor
  point (You could install the magnet into
  the disc screw or the sprocket screw.)
- The speed displayed on the meter will be affected by the setting, please make sure the setting number is correct before you make the setting.

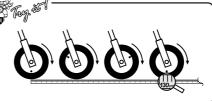

Please reset this setting value when you change a different size tire.

- Example : If the tire circumference is 1,300 mm.
- Press the **Select button** to choose the setting number.
- •EX. Now the tire circumference is setting from 1,000 mm.
- Now the digit in thousands setting number is flashing!

NOTE Setting range : 300 ~ 2,500 mm Setting unit : 1 mm

 Press the Adjust button to choose the setting number.

- Press the **Select button** to enter the sensor point setting.
- •EX. The circumference setting is changed from **1,000 mm** to **1,300 mm**.

- •Example : If the sensor point is setting 6P.
- Press the Adjust button to choose the setting number.
- •Ex. Now the sensor point is setting from 1P.

Now the setting value is flashing!

NOTE Sensitive point : 1 ~ 20

- Press the Select button to go back to the circumference and sensing point setting screen.
- Ex. Now the sensor point is setting from 1P to 6P.

 Press the Adjust button to enter next operation setting.

# 4-2 RPM pulse setting

point to measure the

wheel circumference with a measuring tape.

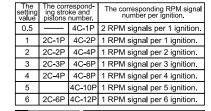

•Press the **Select button** to enter the RPM pulse setting screen.

- EX. You want to connect the RPM signal wire to the pick up signal and there are 13 flywheel signals per turn.
   Press the Adjust button to choose the
- Currently setting value will blink.

setting number.

NOTE Setting range: 0.5 \ 1 ~ 25

Most of the 4-cycle bikes with one single piston are igniting every 360 degree once, so the setting should be the same as the bike with 2-cycle and one piston engine.

- Press the Select button to enter waveform setting screen.
- ●EX. Setting engine ignition angle from P-1 to P-13.

- •Example : To set waveform to high waveform (Hi-Act).
- Press the Adjust button to choose the setting number.

Currently setting value will blink.

NOTE Setting range : Hi-Act \ Lo-Act

NOTE During RPM signal detection,

- •Press the **Select button** to enter rpm stage setting screen.
- •EX. Setting from high wave (Hi-Act) to low wave (Lo-Act).

- •Example: To set rpm stage value as 10.000 RPM.
- Press the Select button to choose the setting number.
- •EX. Current rpm stage value is 15,000 RPM. Currently setting value will blink.

NOTE Setting range: 10,000 12,000 \ 15,000 RPM

• Press the Select button to enter the

• Example: If the vehicle is a YAMAHA T-MAX 530, it's resistance is 100  $\Omega$ 

Press the Adjust button to choose the

1200  $\Omega$  SW (turn off)

setting range : USER  $\times$  100  $\Omega$   $\times$  250  $\Omega$   $\times$  270  $\Omega$   $\times$  510  $\Omega$   $\times$ 

according to the service manual.

**NOTE** The fuel gauge resistance

circumference and sensing point

setting screen.

setting number.

• Press the Adjust button to choose the setting number.

- Press the Select button to return to rpm stage setting screen.
- •EX. Setting rpm stage value form 15,000 RPM to 10,000 RPM.

• Press the **Adjust button** to enter next operation setting.

NOTE Custome fuel level resistance:

1) Manual - Please check 4-3-1

Setting Instructions.
2) Auto - Please check 4-3-2 Fuel Level Resistance Auto

Setting Instructions.

• Press the **Select button** to enter 4-3-3

•EX. Setting fuel meter's resistance

fuel warning setting screen.

value from 100 to 270.

NOTE Fuel meter will be displayed with the wiring connected.

Fuel Level Resistance Manua

- •Example : To set maximum fuel level as 10.
- Press the Select button to choose the setting number.
- Currently setting value will blink.

• Press the Adjust button to choose the setting number.

- Press the Select button twice to enter 4-3-3 fuel warning setting menu.
- •EX. The highest fuel level setting is changed from 0 to 10  $\Omega$ .

# 4-3-2 Fuel level resistance auto detection setting

• Press the **Select button** to enter the lowest fuel level's resistance auto detection screen.

## **⚠** CAUTION!

- Before detection, ensure that your current fuel level is in the lowest position that you would like to have.
- •Stop the vehicle for a few seconds to allow the fuel surface to become steady, then start the detection of the resistance.

•For example of YAMAHA T-MAX 530, if the fuel surface sensor float in the lowest position then it will detect the resistance around 90 Ω.

The lowest position

• Press the Adjust button to detect the lowest fuel level's resistance.

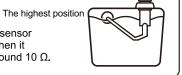

- Press the Select button 5 times to enter the lowest fuel level resistance auto detection screen.
- •EX. Auto Detection the lowest fuel level resistance is 90  $\Omega$ .

#### **⚠** CAUTION!

- •Before detection, please ensure your current fuel level is in the highest position that you would like to have.
- •Stop the vehicle for a few seconds to allow the fuel surface become steady, then start the detection of the resistance.

•For example the YAMAHA T-MAX 530, if the fuel surface sensor float is in the highest position then it will detect the resistance as around 10  $\Omega$ .

•Press the Adjust button to detect the highest fuel level resistance.

- Press the Select button 5 times to go back to the fuel gauge resistance.
- EX. Automatically detect the highest fuel level resistance value as 10  $\Omega$ .

# 4-3-3 Fuel warning setting

- Example : To set fuel warning value
- Press the Adjust button to choose the setting number.

Currently setting value will blink.

**NOTE** Setting range : 10%, 20%, 30%, 40%, 50%, Fuel meter will not display when

fuel meter's wire is not installed.

- Press the **Select button** to return to fuel level resistance value setting
- •EX. Setting maximum fuel level from 30% to 10%.

•Press the Adjust button to enter next operation setting.

# 4-3-1 Fuel level manual setting

4-3 Fuel gauge resistance setting

- Press the Select button to enter the lowest fuel level's resistance setting
- Example : For YAMAHA T-MAX 530. according to the service manual, the fuel tank resistance from low to high is 90 - 100  $\Omega$  (the lowest) and 4 - 10  $\Omega$ (the highest). So enter the setting value as  $10 \Omega$  .

Normally, we will recommend to choose the closest number set as the range to ensure that riders will not run out of gas before the fuel level indication, example, for YAMAHA T-MAX it's 90 - 100  $\Omega$  and 4 - 10  $\Omega$ , in which case we will suggest to use 90 - 10  $\Omega$  as the lowest and highest range.

- Example : To set minimum fuel level as 90 Ω.
- Press the Select button to choose the setting number.
- Currently setting value will blink.

●Press the Adjust button to choose the setting number.

- Press the Select button twice to enter maximum fuel resistance value setting screen.
- •EX : Setting minimum fuel level from 0 to 90.

# 4-4 Clock setting

•Press the Select button to enter the clock setting screen.

- •Example : To set time (minute) as 10 minutes.
- Press the Select button to choose the setting number.
- Now the setting value is flashing!

• Press the Adjust button to choose

the setting number.

time setting screen.

**NOTE** Setting range : 00 ~ 59 minutes.

- •Example : Changing the 24H.
- Press the Adjust button to choose the setting number.
- Currently setting value will blink.

NOTE Setting range: 12 / 24 H

- •Press the Select button to enter time adjustment (hour / minute) setting screen
- •EX. Setting time format from 12-hours to 24-hours.

- •Example : To set time(hour) as 10 hours.
- Press the Adjust button to choose the setting number.

NOTE Cursor moving order is : Hour > Digit in ten minutes >

Digit in minutes **NOTE** Setting range : 0 ~ 23

- Press the **Select button** to return to
- •EX. Setting hour/minute from 0 hour 0 minute to 10 hours 10 minutes.

• Press the **Adjust button** to enter next operation setting.

# 4-5 Backlight brightness setting

•Press the Select button to enter the backlight brightness setting screen.

- Press the **Select button to** go back to the backlight brightness setting screen.
- EX. The backlight brightness setting is changed from 5 (100%) to 3 (60%).

- •Example : You want to set the brightness at 60 % (3).
- Press the Adjust button to choose the setting number.

NOTE Setting range:
1 (Darkest) ~ 5 (Brightest),
5 different levels available. Setting unit: 20% per level. The backlight brightness will set the value.

• Press the **Adjust button** to enter next operation setting.

# 4-6 Oil maintenance mileage setting

• Press the **Select button** to enter the oil maintenance mileage setting

- Press the Select button to enter 4T motor oil millage setting main screen.
- EX. Setting motor oil millage value from 2T to 4T.

- •Example : To set motor oil millage value as 4T.
- Press the Adjust button to choose the setting number.
- EX. Current motor oil millage is 2T.
- Currently setting value will blink.

NOTE Setting range : 2T / 4T

- •Example : To set motor oil millage parameter as 1,500.
- Press the Select button to choose the setting number.
- •EX. Current motor oil millage parameter is 1,000.

NOTE •2-stroke motor oil millage is indicated by external signal warning (motor oil indicator will lit).

•4-stroke motor oil millage is internally set by the chronograph.

• Press the Adjust button to choose the setting number.

•Press the Adjust button to enter next operation setting.

4-7 Speed unit setting

- •Press the **Select button** to go back oil maintenance mileage setting screen.
- •EX. Setting motor oil millage parameter from 1,000 to 1,500.

•Press the **Select button** to go back speed unit setting screen.

• Press the Adjust button to choose the setting number.

• Press the Select button to enter the

speed unit setting screen.

•Press the Adjust button to enter next operation setting.

# 4-8 External ODO

• Press the Select button to enter the external ODO setting screen.

- Press the Select button to the external ODO setting screen.
- •EX. The external ODO is changed 0 to 12,500 km.

- •Example: To set external total millage value to 12,500 km.
- Press the Select button to choose the setting number.

↑ Currently setting value will blink.

•Press the Adjust button to enter next operation setting.

# 4-9 Internal ODO

Example : Current internal ODO is 50,000 km.

 Press the Select button three seconds to go back to ODO screen.

clearinternal ODO.

•The main screen.

# 5 Trouble shooting

The following situation do not indicate malfunction of the meter. Please check the following before taking it in for repair.

Trouble	Check item	Trouble	Check item
The meter doesn't work when the power is on.  The meter shows wrong information.  Speed does not appear or appear incorrectly.  The odometer and trip meter are not accumulated or accumulated the wrong data.	<ul> <li>The power doesn't supply to the meter.         →Please make sure the wiring is connected.         The wiring and fuse are not broken.         →The battery is broken or the battery is too old to supply enough power (DC 8 V) to make the meter work.</li> <li>Check the voltage of your battery,and make sure the voltage is over DC 8 V.</li> <li>Make sure the speed sensor is connected properly.         →Please check if speed sensor is connected and working properly. Also check whether the cable of speed sensor has broken or lose or not.</li> <li>Check the tire-size setting.         →Refer to the manual 4-1 circumference and sensing point setting.</li> <li>It is possible that the permanent power wire is not connected properly.         →Check if the red positive wire is connect propery.</li> </ul>	Tachometer does not appear or appear incorrectly  The odometer and trip meter is not accumulated or accumulated wrong data.
